

Awaaz

Your Voice. Amplified. Protected.

Introduction

Awaaz is a safety-focused platform designed to empower individuals to speak up against threats, harassment, or unsafe situations. It combines technology with trust, making reporting and seeking help easier, faster, and more secure.

Why Awaaz Matters?

- Rising concerns about personal and public safety.
- Lack of accessible and trusted channels for reporting incidents.
- Fear of stigma, retaliation, or being ignored prevents many from speaking up.
- Need for a reliable, secure, and supportive platform that protects the reporter's voice while ensuring timely action.

Features

- Scenario Reporting: Users can instantly report unsafe incidents with details and evidence.
- Legal Aid: Quick access to micro-lessons and legal guidance to understand rights.
- Anonymous Option: Report incidents while safeguarding identity.

Tech Stack

1. Frontend:

- React.js → For building an interactive and responsive user interface.
- Tailwind

2. Backend:

- Django (Python) → For backend development, handling APIs, authentication.

3. Database:

- SQLite (Default Django Database) → Lightweight database used for development and storage.

Future Scope

- Live Crime Tracking: Real-time updates on nearby threats.
- Safe Route Maps: AI-based navigation suggesting the safest paths.
- NGO Connect: Bridge between victims and NGOs for support & counseling.
- Online FIR Filing: Direct integration with law enforcement systems for faster reporting.

**Thank you
for listening!**
